

Scenario : Recruiter requests access to the portal

Primary Actor : Recruiter

Goal in Context : The recruiter wants access to job seeker profiles in a certain category

Precondition : Recruiter has access to the portal and is aware that he has to place a request for access to the portal

Trigger : Recruiter sends out access request mail to the Admin

Scenario Details :

- 1) The portal enquires whether the user is a recruiter, job seeker or admin.
- 2) Once the recruiter mentions that he is a recruiter by clicking on recruiter button on Homepage of the portal , he is asked to either enter his login credentials or request for login credentials from the admin.
- 3) A new recruiter with no existing login credentials selects the option to send a request for login credentials to the admin. He is directed to fill up a form with some required details.
- 4) He enters his email ID , selects category he is interested in, enters first name and last name in this form and submits it.
- 5) On successful submission,recruiter receives a mail in the entered email ID that his request has been sent to the admin
- 6) He waits for response from the admin which would contain his login credentials

Exceptions:

- 1) The recruiter does not use portal within UdS network
- 2) The recruiter enters invalid email ID
- 3) The admin chooses not to send login credentials to the recruiter

Priority: Very High
